

Powering Digital Transformation Through Blockchain Innovation

ABOUT US

Habix Technologies is a technology venture studio focused on transforming organizational ecosystems through innovative digital solutions. We build proprietary blockchain transformation frameworks and validate them through our own platforms before deploying them for client organizations

MARKET OPPORTUNITY

Kenya Digital Payments

\$7.6B

Projected to grow to \$24.01B by 2029 (25.74% CAGR, 2024–2029)
Source: Statista Market
Forecast — Digital Payments, Kenya

Mobile Money Value (P2P) in Kenya

\$67B

Up from KES 6.81 trillion in 2024
Source: KNBS Economic Survey 2026

Cryptocurrency Adoption in Kenya

+\$19B

Received between July 2024–June 2025, the 4th largest crypto market in Africa
Source: Chainalysis

PROBLEM STATEMENT

EMERGING EVIDENCE FROM AFRICAN ORGANISATIONS

Research suggests that, unlike traditional formalised process models, many African organisations develop business capabilities through practice-based, adaptive, and context-driven approaches (Anning-Dorson et al., 2025; Fredericks & Seymour, 2022). This is particularly evident in non-profit and resource-constrained settings, where operational effectiveness is sustained through experiential learning, internal accountability, and continuous adaptation rather than formal business practices (Belitski & Sikorski, 2024; Fredericks & Seymour, 2022).

CONTINUED...

These findings indicate that human resource optimisation, skills alignment, and organisational learning are critical enablers of process performance (Anning-Dorson et al., 2025; Fredericks & Seymour, 2022). Together, they suggest that business capability development in African organisations follows alternative maturity pathways that differ from conventional business models while remaining strategically important for enhancing organisational performance.

PROBLEM STATEMENT

MARKET GAP

There is a gap between the technical capabilities of blockchain technology and the practical business solutions available to enterprises and SMEs in Kenya.

CUSTOMERS

Businesses need innovative engagement models that improve customer retention while providing measurable value to end users.

FINANCIALS

As digital commerce expands across Africa, businesses require scalable and cost-efficient infrastructure for payments, rewards, and customer engagement

COSTS

Businesses are spending significant resources on transaction processing, customer retention, and rewards administration that could be automated through blockchain technology.

USABILITY

The challenge is not blockchain capability—it is usability. Businesses need Web3 solutions that customers can use without understanding the underlying technology.

VALUE PROPOSITION

SIMPLIFYING BLOCKCHAIN

We simplify adoption by designing and implementing blockchain-powered transformation solutions that integrate seamlessly with existing systems

COST SAVINGS (STABLECOIN SETTLEMENTS)

We help businesses reduce operational and transaction costs by leveraging stablecoin settlements and automated smart contract execution.

TRANSFORMING CUSTOMER ENGAGEMENT

We provide secure, transparent Web3 experiences that allow businesses and customers to benefit from blockchain-powered reward based systems without requiring any technical knowledge.

AREAS OF FOCUS

A solid teal horizontal bar spanning the width of the slide, positioned below the main title.

PROCESS AUTOMATION

Automate supplier payouts, revenue distributions, and business workflows through blockchain-powered smart contracts that execute predefined business rules with speed and accuracy.

CROSS-BORDER SETTLEMENT

Enable near-instant global payments using USDC on Solana, reducing settlement times and transaction costs while improving access to international markets.

AUDIT TRAILS

Create a single, tamper-proof source of truth that enhances transparency, simplifies compliance, and eliminates costly reconciliation processes.

TOKENIZED ECOSYSTEMS

Strengthen customer engagement and retention through programmable blockchain-based loyalty programs that reward participation and drive ecosystem growth.

AREAS OF FOCUS

A solid teal horizontal bar spanning the width of the left section.

PROCESS AUTOMATION

Habix Technologies automates complex financial workflows through blockchain-powered smart contracts. Business rules are executed automatically, enabling supplier payouts, revenue distributions, commission settlements, and partner payments without manual intervention. This reduces administrative overhead, minimizes processing errors, and ensures that transactions are executed transparently according to predefined conditions, creating more efficient and scalable operational processes.

AREAS OF FOCUS

The background of the slide is a dark, reflective surface with several coins. One coin is prominently standing on its edge in the lower-left foreground, while others are scattered and blurred in the background.

CROSS-BORDER SETTLEMENTS

By leveraging USDC on the Solana blockchain, Habix enables near-instant cross-border settlements without relying on traditional correspondent banking networks. Businesses can transfer value globally within seconds while significantly reducing transaction costs compared to conventional international payment rails. This provides organizations with faster liquidity, improved cash flow, and 24/7 settlement availability, making global commerce more accessible for African businesses. Solana supports sub-cent transaction fees and rapid confirmation times, making it well suited for high-volume business payments.

AREAS OF FOCUS

A solid teal horizontal bar spanning the width of the left section.

IMMUTABLE AUDIT TRAILS

Every transaction processed through Habix's platforms is permanently recorded on the blockchain, creating a secure and tamper-resistant audit trail. A shared, immutable source of truth improves transparency between organizations and their stakeholders while significantly reducing reconciliation effort across multiple systems. The result is faster financial reporting, stronger compliance, and greater confidence in operational data integrity

AREAS OF FOCUS

A solid teal horizontal bar spanning the width of the left section.

TOKENIZED ECO-SYSTEMS

Habix enables organizations to build tokenized ecosystems that transform customer engagement into measurable digital value. Businesses can issue programmable loyalty tokens that reward purchases, referrals, memberships, and community participation. Unlike traditional loyalty points, blockchain-based rewards are transparent, instantly redeemable, and can evolve into interoperable ecosystem incentives, strengthening customer retention while creating new opportunities for partner collaboration and ecosystem growth. A good example of this is the Asante rewards program , a pioneer loyalty program managed by Kenya Airways

WHAT WE HAVE BUILT

Habix develops and validates blockchain transformation models through proprietary platforms before implementing any developments for clients. Platforms we have built and are fully-functional include

- Cradle property agency platform
- WRHSE lifestyle retail marketplace

Discover Your Ideal Home Away From Home

Welcome to Cradle, your premier Web 3 platform for rental property solutions. Whether you're looking for a vacation home, cozy apartment, or long-term accommodation, we offer a diverse selection of options to meet your needs. Explore our user-friendly listings to find your ideal home away from home with ease and confidence.

Furnished

Unfurnished

City

Min Price

CRADLE PLATFORM

WHAT IS CRADLE?

- Next-generation Web3 property agency platform and marketplace
- Tokenized platform utility using our dedicated \$HBX ecosystem
- Blockchain powered tenant-agent interactions
- Utility token economy valid in real-world environment

Experience the Cradle platform here :

<https://cradlefrontend.netlify.app/>

WRHSE PLATFORM

WHAT IS WRHSE

- Web3 –enabled lifestyle retail marketplace
- Blockchain-powered checkout
- Token-enabled payments
- Immutable purchase records
- Customer loyalty mechanics

Experience the WRHSE platform here :

<https://wrhse.habixgroup.top/>

WRHSE DEMO

JOURNEY STEP ONE : CART CHECKOUT

We tested web3 payment integrations with our unique retail platform WRHSE. In the first step of the checkout journey, the user connects their Phantom wallet and after populating the cart proceeds to checkout. Prices are quoted in our native token \$HBX

WRHSE DEMO

JOURNEY STEP TWO : PAYMENT CONFIRMATION

After providing delivery details the user proceeds to pay for the items using the same connected wallet. Once the transaction goes through a confirmation message is displayed including a link to the transaction viewable on the Solana blockchain through Solscan. This is visible publicly to both the payee and retailer.

WRHSE DEMO

Your WRHSE purchase order has been confirmed and your payment was received successfully.

Order Summary

Item	Qty	Price
VIPWC Branded Bandana	1	\$12000
Total: \$12000.00 (12000.0000 \$HBX)		

Delivery Details

test location 7

📞 0794731013

Transaction: [3kxkm91jpR1k5aFo74eepSQ4d91wufNyNwJ3V8PV6kut52BcJ7ePnxU1V9XUwD9YhhgrKE8MtHBz2obEHTotHnyE](#)

JOURNEY STEP THREE : EMAIL CONFIRMATION

Once the payment is confirmed, the user receives an email containing the complete order details and transaction confirmation. The email includes the full blockchain transaction (Tx) signature, which serves as a unique, verifiable, and permanent digital receipt for the transaction.

WRHSE DEMO

JOURNEY STEP FOUR : BLOCKCHAIN TRANSACTION

Once a journey is completed, a permanent transaction record is created and can be independently verified directly on the Solana blockchain. This information can be accessed through blockchain explorers such as Solscan, providing a transparent and immutable audit trail. By leveraging the blockchain to store transactional records, the platform significantly reduces the need for internal data storage while ensuring data integrity, traceability, and long-term accessibility.

REAL PAYMENT TRANSACTION

REAL WORLD APPLICATION

The screenshot captures a real-world blockchain transaction processed through our infrastructure. The transaction was generated during a purchase on our WRHSE retail platform, demonstrating the successful execution of a complete Web3-enabled checkout journey. You can view the transaction on the Solana blockchain here : <https://solscan.io/tx/2r4FMbX7T2daYgDgjCo7TdwpQr6RbPA2HZmL14cP3tEFfRhBS9mDguAyQhvbySGQp18Gdm64DbjroFrL9n5hY9X5>

SUMMARY

At Habix Technologies, we believe in unlocking the full potential of Web3 for businesses. By bridging the gap between traditional business operations and blockchain technology, we deliver innovative solutions that enhance payments, customer engagement, and digital ecosystems. We thrive on technical excellence, market insight, and a commitment to building practical, enterprise-ready Web3 solutions. As we continue to grow, our mission remains clear: to simplify blockchain adoption and empower organizations to transform the way they engage, transact, and create value in the digital economy.
